Landlord Solutions:

Offer your tenants a professional telephone system and enterprise quality internet access for a consistent monthly fee. Better yet, build it into the rent! Isn't it time you shared in the proceeds of the telecommunication services used by your tenants rather than simply providing referrals to local providers?

- Increase revenue
- Optimize space
- Improve retention

When individual tenants obtain telephone and internet service, your building will contain either too much or too little capacity.

Take control – one provider brings in telephone and internet access to a central location and you control the distribution to each tenant. Simply decide whether to offer unlimited free calling or charge based on utilization.

The provider delivers everything you need to bill your tenants appropriately and becomes your built-in 24/7/365 support for the rare telephone and internet service issues. Tenants call them – not you.
